

Bokashi Composting

Bokashi composting ferments food scraps using microorganisms.

Fill container and allow contents to ferment for 2 weeks. Continue to drain.

DRAIN
Every 1-3 days.
Dilute 1 to 100, use as fertilizer.

BURY

In the ground. Next to plants. Bokashi turns to soil in 2+ weeks. Moisture and temperature impact time.

ADD TO

Amend compost and speed up composting process. Add to vermiculture.

PLANT

Amend soil with bokashi. Wait two weeks. Plant. 1/3 bokashi to 1/3 soil. Top with 1/3 soil.
